

ITCSS Small Business Complete

Boost your productivity and save money with ITCSS

What is Small Business Server 2008?

Small Business Server (SBS) 2008 is an all in one server software package providing businesses a comprehensive IT platform to boost their productivity and to help them get the most of modern technology.

Similar to its earlier editions, the latest one integrates the most important business elements in one, easy to use suite:

- communication and collaboration platform
- data storage
- centralised management
- internet connectivity
- web services
- remote access
- data security

Who is this package for?

This package is designed for businesses that need to transform from a basic peer-to-peer network to something more solid.

Very often we see systems that grew up from just single PC and / or laptop and it is now the time to consolidate and organise everything in order to help a business progress.

How can SBS 2008 help me and my business?

SBS suite allows you to use technologies that were only available to larger organisations. Using the latest techniques, you can now better control data flow, manage your workload, control employees and easily work from out of office.

Sharing data between employees, hosting your own intranet portal, accessing email on the move and work with your data from remote locations – these are just a few of the great features of the new edition of SBS.

What if I need something more in a future?

SBS 2008 was designed to allow it to grow together with your business. You can easily add users, servers, business applications and even expand into other Microsoft technologies. If you ever grow above the 75 users limit, SBS can be easy transitioned into a full Microsoft Server platform.

Will my vital data be safe?

Yes. SBS has built in mechanisms to protect your data from the very beginning. Automated update distribution ensures your computers are always safe and less exposed to internet threats. Your files stored on the server are always safe and can be restored after deletion thanks to continuous data

snapshots. Access to your network can be limited depending on your needs. Appropriate security policies can be created and deployed quickly and easily as your requirements change.

On top of built-in security features, we include the market leading Sophos Small Business Suite security software; a solution especially designed for business environments.

Is it easy to jump up from my current system?

Yes. ITCSS will ensure that all your data are moved over in a safe and timely manner. We would backup all your data first and then deploy the SBS. Once it is in place, your data would be copied to the new server. We can move your emails, contacts, accounts, music, pictures, generic files and line-of-business applications. If you have any specific or non-standard software, separate arrangement may be required.

We will audit your existing system prior to committing to SBS installation.

Is SBS all I need to help my business?

In general, yes. However, based on our experience, it is good to use the opportunity and build a system using a few additional elements.

We have developed the ITCSS Small Business Complete package to help businesses fully benefit from the latest technology.

Our package includes:

- a branded hardware server (Dell or HP)
- Microsoft Windows Small Business Server 2008 Standard Edition software package
- a tape drive based backup solution with Symantec software
- secure VPN broadband router by Draytek
- business class Sophos Security Suite Small Business Edition (anti virus, anti spam)
- UPS device
- 3 months basic support from ITCSS

If you need anything above that, please contact us to speak about details.

What are the benefits of ITCSS package?

Based on our experience, we have included all the necessary components to ensure you can focus on your work rather than worry about your IT.

Your data is always safe, day and night; access to the system is always monitored and controlled; access to data is always quick thanks to solid hardware base.

Should any problems arise during using your new system, we are always on call to help you.

Having an SBS installed, you can carry on with your business in a more professional way. Your work will be easier, quicker and your business will look more professional.

Are there any requirements for SBS to work for me?

There are a few things necessary to get the most out of SBS:

- in order to benefit from an email server and have remote access to your system, it is required to have a static IP address for your internet connection; this can be arranged with your internet provider and we are happy to assist

- your existing workstations need to run either Windows 2000, Windows XP Professional or Windows Vista Business / Ultimate operating system; if there is a need of upgrading your current workstations, we will provide a separate quotation
- our package is designed for wired networks; if you require wireless connections or your current network is based on wireless connections, please contact us for details and / or necessary upgrades
- analog phone line is required to use the built-in fax server feature

How much does it cost?

Our package is sold at a fixed price of £3499+VAT. Package contains as follows:

- 1 x Dell/HP server with 17" flat screen, 4GB RAM, 2x500GB SATA HDD (RAID1), DAT72 backup drive, DVD rom drive, mouse, keyboard, analog modem
- 1 x APC SmartUPS 1500
- 1 x Draytek Vigor 2950 VPN router
- 1 x Draytek Vigor 120 ADSL modem
- 1 x 16 port 1Gb Ethernet switch
- 1 x Windows Small Business Server 2008 Standard Edition 5 user license pack
- 1 x Symantec Backup Exec SBS Edition
- 1 x Sophos Security Suite Small Business Edition 1 year 5 user license
- 5x 36GB backup tape (Monday to Friday full backup)
- 3 months free ITCSS support service
- Installation service (1x server install/configure, up to 5x PC configuration, up to 5 user account creation, data backup (up to 20GB), UPS install/configure, backup schedule setup, 1x Draytek Vigor setup, security policies and remote access setup as per your requirements, existing printers / scanners setup)

Can I request additional components?

Yes. Wireless router can be provided as an alternative, more tapes and different backup schedule configured, higher capacity hard drives and backup drive.

The Windows Small Business Server 2008 Premium Edition also can be provided. This edition includes market standard MS SQL Server software for your databases.

Additional charges apply for any extra features / components.

OK, I think I'm ready to talk about details.

Great. You will not regret. If you want to find out more, please contact us immediately:

- By phone: **020 8889 8282**
- By email: **info@itcss.biz**

We are always happy to give you more details about what and how we do.

Please note standard lead time for this offer is 1 month.

Upfront payment is required for hardware and software; installation fee payable 14 days after the installation.

A server always comes preset according to information received from you. Any changes to the specification after that will be charged separate.

Depending on your individual circumstances, it may take up to 2 working days to install the package.
